

**Take control
of your uptime**

To do solid business, you need solid uptime from your machines and their drive systems. With help from Häggglunds service experts, you can minimize risk and maximize reliability.

Peace of mind with Preventative Maintenance

When it comes to drive system health, acting is better than reacting. Through our Preventative Maintenance (PM) program, Häggglunds specialists keep your costs down and your production up with three annual visits.

Visit 1: Fitness Check

Also available as a standalone service, a Fitness Check identifies issues that need attention – right away or in the near future. A Häggglunds specialist inspects your drive in depth, giving you a full report of its status and recommendations to prevent unscheduled downtime. Besides on-site actions, the latter might include component repairs at one of our workshops.

Visit 2: Minor PM

Following a Fitness Check, a Häggglunds specialist spends a day at your site to address the identified concerns. That includes making adjustments, changing filters and taking samples, plus digging deeper for other issues that could lead to failure.

Visit 3: Major PM

For complete peace of mind, a Häggglunds specialist visits your site during a planned shutdown. That allows pump adjustments, detailed component inspections, leakage repairs, drain flow analysis and other services that ensure total reliability.

More ways to secure performance

Häggglunds training

Knowledge is as much a part of preventative maintenance as any actions our specialists take. The more your operators and technicians know about your installed drive systems, the more they can do themselves to reduce drive downtime. With training from our Häggglunds experts, in the classroom or in the field, your staff can learn everything from basic hydraulic skills to drive troubleshooting.

Drive unit upgrades

If your hydraulic drive units are older, they may be in need of more than just routine maintenance. Retrofitting a new unit can be more cost-effective than replacing worn-out or obsolete components, and it brings other benefits as well. Ask us about our newer and more compact Häggglunds drive units, whose upgraded control and performance can lower your operating costs and provide rapid payback.

Motor repairs and upgrades

Häggglunds motors are designed for years of problem-free service. But our qualified workshops are ready to restore productivity, for example if motor issues are discovered during a Fitness Check. You can count on top-quality repairs, and we'll inform you of any upgrade opportunities that will let you take advantage new motor developments.

YOUR GOALS ARE OUR GOALS

- ▶ Increasing machine reliability
- ▶ Increasing uptime and production
- ▶ Saving costs by reducing unplanned downtime
- ▶ Improving equipment condition
- ▶ Improving hydraulic knowledge at your site
