

Relief, bi-directional direct acting poppet type differential area

Common cavity, Size 10

VSNG-10A

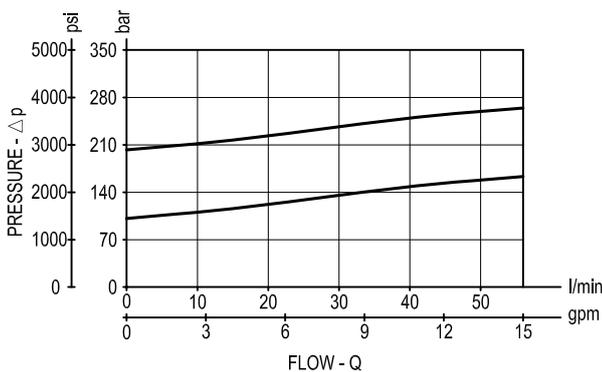

04.11.59 - X - 85 - Z

Description

Flow is blocked bi-directionally between 1 and 2 until pressure at either port increases to meet the selected valve setting, lifting the poppet from its seat and allowing relief flow to the opposite port. The unique Bosch Rexroth Oil Control poppet design provides consistent cracking pressures at both ports and enhanced stability at all flows and pressures. Maximum difference for crack pressure in both direction : 10 bar (145 psi)
